

# River Walk Trash Cans are at Your “Disposal”

Sorry about pun, but it’s hard to let a good joke go to “waste.” Actually, trash around the River Walk area can be a problem for water quality if we’re not careful. Light-weight trash that floats in the river is just ugly. Chips and tortillas that people often toss to the wildlife are not good for the animals and lead to high bacteria levels in the river. Unsecured trash can also attract extra critters.

So, waste no time! Make sure all trash is disposed of properly in the numerous trash bins found along the River Walk. And, feed people-food only to people. We appreciate your help in keeping the River Walk and the San Antonio River clean. **No joke.** [www.RiverLifeLoveit.org](http://www.RiverLifeLoveit.org)

**River. Life. Love it.**
